Intellectual Property, Pharmaceuticals and Public Health

Kenneth C. Shadlen 2011-01-01 'This impressive collection offers fascinating new perspectives on the impact of pharmaceutical patents on access to medicines in developing countries. The volume's editors have put together an important book that sets out clearly the challenges to public health in a wide range of national contexts. The book will be a valuable text for all scholars and decision-makers interested in the global politics of intellectual property rights and public health.' - Duncan Matthews, Queen Mary, University of London, UK This up-to-date book examines pharmaceutical development, access to medicines, and the protection of public health in the context of two fundamental changes that the global political economy has undergone since the 1970s, the globalization of trade and production and the increased harmonization of national regulations on intellectual property rights. With authors from eleven different countries presenting case studies of national experiences in Africa, Asia and the Americas, the book analyzes national strategies to promote pharmaceutical innovation, while at the same time assuring widespread access to medicines through generic pharmaceutical production and generic pharmaceutical importation. The expert chapters focus on patents as well as an array of regulatory instruments, including pricing and drug registration policies. Presenting in-depth analysis and original empirical research, this book will strongly appeal to academics and students of intellectual property, international health, international political economy, international development and law.
